

Critical Path: **GIV-96** → **GIV-95** → **GIV-91** → **GIV-28** → **GIV-12**

As per usual, the main stories that needed to get completed first were the cleanup/refactoring ones. In this case the refactor that impacted all stories was the authentication refactor since all pages/routes require some sort of authentication. Since the main function of our app is the pickup feature, it was also crucial that we get it in good shape during the last sprint which is why GIV-95 was important. The next stories (GIV-91, GIV-28, GIV-12) follow this same logic as they all ensure the pickup/donation system is functioning as desired.
