

Explanations:

This burndown chart shows some delay before any work is accomplished. This makes sense because many members chose to start their stories later to accommodate other courses. Afterwards the line dropped quickly because stories were finished at a more rapid pace after other course commitments were submitted..

Velocity:

The velocity this sprint was lower because the team capacity was much lower for this sprint. The velocity makes sense since many members had to start the sprint later due to too many assignments stacking up.
