Critical path: GIV-48 → GIV-13 → GIV-6 → GIV-4

Explanation: GIV-64 is ideally done first because all the other tasks rely on it. Also the front-end implementations of the stories should be done after the GIV-48 story is complete. The next few are self-explanatory (Add before remove, add before search etc.). To keep the sprint on schedule we have regular meetings where everyone can share their progress and ask for help if need be. Unfortunately these past few weeks were very busy (other courses) so we were unable to finish all the stories. We learned that good time management never hurts and is crucial to the development process.
